

Pathophysiology for Enhanced Practice

MECP4002

Healthcare professionals working in health and social care, in a variety of different specialties, require core knowledge of underlying pathophysiological processes. This knowledge is essential in the formulation of safe and accurate working and differential diagnoses in practice.

This module will support the multi-professional enhanced practitioner to understand the key pathophysiology processes which may produce abnormal clinical examination findings in a variety of specialities.

(If completing the full PG Cert Enhanced Clinical Practitioner; this is the second module.)

Content will include:

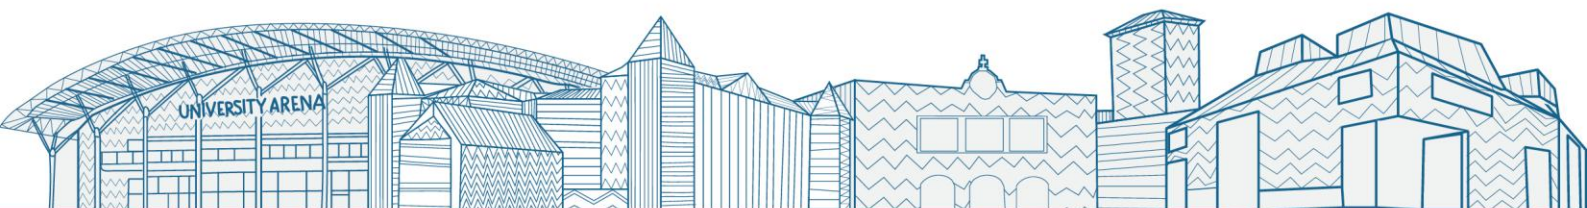

- Pathophysiology relating to the cardiovascular, respiratory, nervous, gastrointestinal, urinary, musculoskeletal and endocrine systems
- Mental Health pathology
- Immunology, biochemistry, haematology
- Challenges of requesting investigations in clinical practice

Assessment

E-Poster Presentation
